Link Microtek launches new website for Engineering Division

The new site also includes links to the company's main website, www.linkmicrotek.com, which is focused primarily on Link Microtek's distribution activities, and its other dedicated site, www.radhazonline.com, which covers the extensive range of products and services available to customers in the RF radiation safety sector.

Link Microtek has launched a new website dedicated to activities of the company's Engineering Division, which designs and manufactures a comprehensive range of waveguide and coaxial microwave components, assemblies and subsystems.

As well as presenting an overview of the Division's capabilities, www.linkmicrotekeng.com provides easy access to PDF datasheets on a wide variety of standard products for applications in the frequency range DC to 40GHz. These include horn antennas, rotary joints, attenuators, filters, couplers, OMTs, TEM cells and many more.

In addition, the Engineering Division shortform catalogue can be downloaded from the site's home page, and a 'Latest News' section keeps visitors updated with recent product and news announcements.
