

Link promotes internal staff to boost customer service levels

Link Microtek, the manufacturer and supplier of RF and microwave components and subsystems, has promoted two members of staff to newly created positions as part of an ongoing strategy to enhance overall customer service levels.

Kevin Wrightson has moved from his role as calibration and service engineer to join the company's production engineering team as a test engineer.

At the same time, storeman Richard Green has taken up the role of sales and service administrator, with his former position being filled by new recruit David Barnes.

Commenting on the

promotions, managing director Steve Cranstone said: "Both Kevin and Richard have been with Link Microtek for several years, and this experience will stand them in good stead as they get to grips with the new challenges ahead. We continually strive to improve service levels across all areas of the business and are confident that these changes will make a significant impact in this regard."
